

《結構學》

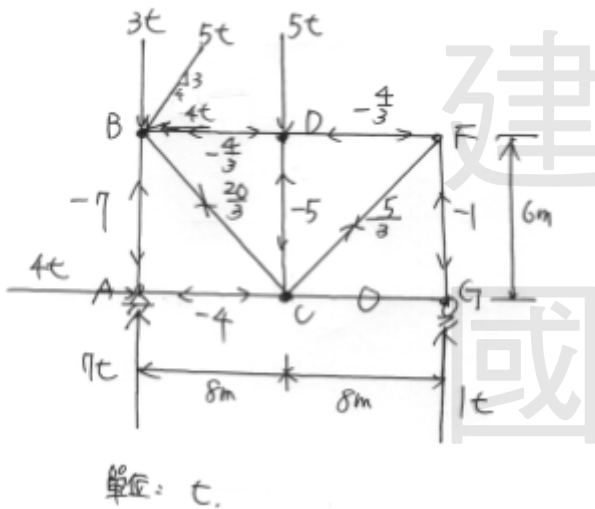

一、如圖所示桁架(Truss)，試計算每根桿件之內力。(25分)

試題評析	求靜定簡單桁架內力，屬於簡單基本題型。
考點命中	《高點建國結構學講義》洪達老師編撰，P5-12。

解：

4)

二、如圖所示構架(Frame)，若每根柱之斷面尺寸皆相同，試利用懸臂梁近似法(Cantilever method)計算每根桿件兩端之彎矩(Moment)。(25分)

試題評析	屬於基本題型，但計算量大，要多驗算檢視。
-------------	----------------------

考點命中 《高點建國結構學講義》洪達老師編撰，P14-16。

解：

(1) 求重心位置：

$$\bar{x} = \frac{1 \times 0 + 1 \times 9 + 1 \times 15}{3} = 8 \text{ m}$$

$$\therefore \sum M_O = 0 \quad (\uparrow)$$

$$\therefore N_1(1) + (7N_1)(7) + (8N_1)(8) - 10 \times 2 = 0$$

$$\therefore N_1 = 0.175 \text{ (t)}$$

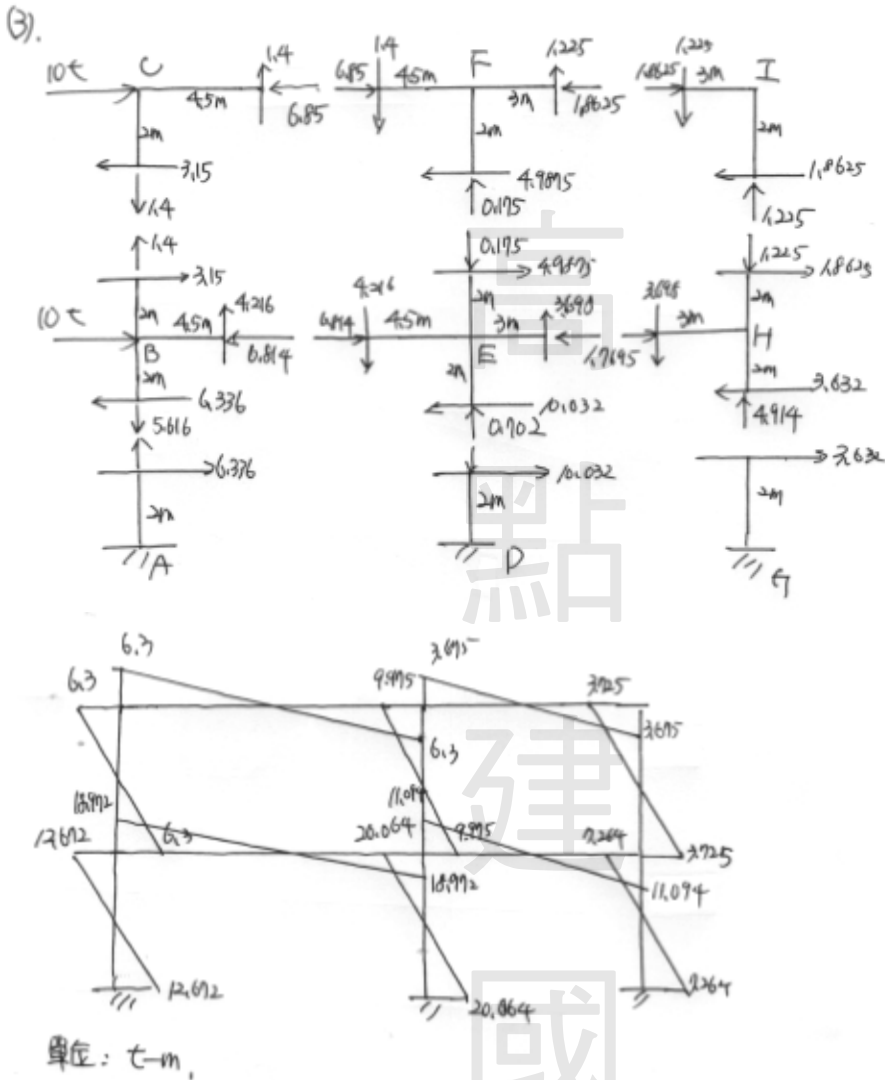

$$\sum M_O = 0 \quad (\uparrow)$$

$$\rightarrow N_2 \times 1 + 7N_2 \times 7 + 8N_2 \times 8 - 10 \times 6 - 10 \times 2 = 0$$

$$\therefore N_2 = 0.702 \text{ (t)}$$

三、如圖所示連續梁，均布載重為2 t/m，請計算每根梁兩端及中央之彎矩。令每根梁之

$$\frac{EI}{L} = 1 \quad (25分)$$

試題評析	屬於傾角稜度法簡單基本題型。
考點命中	《高點建國結構學講義》洪達老師編撰，P9-11。

解：

(1)

$$M_{AB} = \frac{2EI}{6}(\theta_B) - \frac{2 \times 6^2}{12} = \theta_B - 6$$

$$M_{BA} = \frac{2EI}{6}(2\theta_B) + \frac{2 \times 6^2}{12} = 2\theta_B + 6$$

$$M_{A2} = \frac{2EI}{6}(15\theta_B) - \frac{3}{2} \frac{2 \times 6^2}{12} = 15\theta_B - 9$$

$$\sum M_B = 0 \Rightarrow \theta_B = 0.857$$

$$\therefore M_{AB} = -5.143, \quad M_{BA} = 5.143 \text{ (t-m)} \quad (1)$$

$$M_{BA} = 2.914 \text{ (t-m)} \quad (2)$$

$$M_{A2} = -2.914 \text{ (t-m)} \quad M_{A1} = 2.914 \text{ (t-m)} \quad (3)$$

(2)

$$AB \text{ 桿中央弯矩} = 2.567 \text{ (t-m)} \quad BC \text{ 桿中央弯矩} = 5.13 \text{ (t-m)}$$

四、如圖所示構架，試求C點之垂直及水平位移。(25分)

試題評析	求靜定剛架變位，屬於基本題型。
考點命中	《高點建國結構學講義》洪達老師編撰，P6-91。

解：

1)

$$(\delta_c)_v = \left(\frac{1}{2}\right) \left(\frac{P\delta_v}{EI} \times l\right) \left(\frac{2}{3} \times l\right) + \left(\frac{P\delta_v}{EI}\right) (l) (l) = \frac{4l\delta_v^2}{3EI} (\downarrow)$$

$$(\delta_c)_h = \left(\frac{P\delta_h}{EI}\right) \left(l \times \frac{l}{2}\right) = \frac{Pl\delta_h}{2EI} (\rightarrow)$$
